BRANCH: Integrated Mtech CSE
COURSE CODE: CSE0001
YEAR: 1st

INTRODUCTION

In the existing world where everything is just a click away, being digitally active is not a difficult task at all. However, being digitally aware is a completely different story altogether. In this project, the definition of digital literacy is re-established not only as a tool but as a survival kit for being digitally smart, safe as well as responsible.

This project has been divided into five interesting tasks that aim to explore different spheres of our digital lives. It begins with creating a visually appealing infographic that explained the concept of digital literacy from a simple and relatable perspective to me.

Going forward, the second task of this project focuses on creating a digital portfolio of a student through platforms like GitHub, LinkedIn and Kaggle (the platforms that I have chosen). It helped me understand the significance of creating a strong digital presence and how digital platforms can be effectively used to communicate skills and achievements for future tasks.

The third task of this project highlights on the aspect of practical learning through coding and collaboration tools like HackerRank and Google Forms, these platforms encouraged me to enhance skills such as logical thinking and problem-solving skills which are extremely relevant in today's employment time.

The fourth task is a more reflective approach through a scenario analysis with the help of which I was able to analyse the potential risk for digital communication to cause conflict and misunderstanding is highlighted.

The fifth task summarizes the learning points and reflects on digital habits, awareness and responsibility.

Thus, undertaking this project has demonstrated to me that there is more to learning digital literacy than how to use digital tools effectively. It reinforced the fact in my mind that digital literacy is not about how quickly one can click a mouse or how many digital tools one is familiar with but how efficiently and responsibly one uses these tools.

TASK - 1

(CREATE A DIGITAL LITERACY AWARENESS INFOGRAPHIC)

1.1 TOOL USED

For this particular task, I used Canva as my platform for designing a one-page infographic on digital literacy. Canva was an ideal choice because of its User friendly interface, wide range of templates and design elements that assisted me in crafting a clean yet attractive layout. The infographic is divided into various sections using different colours and icons, making it easier for readers (in our case other students) to scan and comprehend the information without feeling confused.

1.2 DECODING THE PIXELS

The design includes important aspects of digital literacy, starting with a basic definition that entails effectively using technology, responsibly sharing and evaluating information and communicating effectively online.

Other important aspects include digital tools that can help students, such as Google Meet, Microsoft Word, Canva, Adobe and Google Docs. Another important aspect is emailing etiquette, which entails being professional, having a proper subject line, writing concisely and proofreading.

Moreover, safe internet practice is included in the infographic, which describes being cautious about personal information, avoiding scams and having a strong password.

I believe that any visual hits the right spot when it follows a consistent colour palette which in turn establishes a permanent meaning in the reader's mind. The dark navy-blue colour used for the infographic represents professionalism, thus allowing the information to stand out clearly. I

used a purple-pink colour to represent creativity and modern digital thinking. I used shades of yellow and orange to represent energy and productivity for the tools section. I further used shades of green to represent growth and professionalism for the email etiquette section and shades of light blue to represent safety and security for the internet practices section. Finally, the multicolour icons give the infographic a fun and engaging overall look.

1.3 INSIGHTS AND CHALLENGES

One thing that I found exceptionally interesting while making this infographic was learning about the appropriate use of colours, spacing and icons in order to improve the presentation of information. While on the other hand, one thing that I found to be a bit challenging was to incorporate the required content in an effective manner without giving the impression of the same being messy.

From this task, I have come to realize that digital literacy is not only about knowing how to use digital tools but also how to use them safely and effectively in our everyday lives.

TASK - 2

(BUILD YOUR STUDENT DIGITAL PORTFOLIO)

2.1 PLATFORMS SETUP

For this task, I have created and updated my profiles on 3 platforms, all of which are quite important for developing a strong academic as well as digital presence. They are:

- GitHub
- LinkedIn
- Kaggle

2.2 PURPOSE

Firstly, GitHub is a website where developers can share their code. I created my profile on GitHub by creating a profile README. I plan to use my GitHub account to upload my projects and track my progress. This will help me in establishing my reputation as a programmer.

LinkedIn is a professional networking site. I have updated my education details such as my educational qualification, educational institution and expected year of graduation. I plan to use my LinkedIn account to connect with other professionals in my field of interest. I will also use it to find internships as well as job opportunities.

Kaggle is a website that is used by data enthusiasts. I created my profile on Kaggle by providing my personal details. I plan to use my Kaggle account to develop my analytical skills by practicing problems. I will also use it to learn from other data enthusiasts

2.3 FUTURE PLANS

Over the next four years, I hope to actively use these platforms efficiently in order to improve my skills, track my learning process and establish a strong online presence. Collectively, these platforms will enable me to progress academically, enhance my skills while improving my chances for the future in a methodical and impactful manner.

TASK - 3

(EXPLORE CODING & COLLABORATION PLATFORMS)

3.1 PLATFORM USED

For this completion of this task, I have chosen coding practice and collaborative digital tools. In this task, I have used HackerRank and Google Forms. The said task has provided me with a well-rounded experience of developing my skills and understanding the use of digital tools for effective communication.

In Part A, I chose to create an account on HackerRank and solve a coding challenge. The task provided me with the opportunity to get familiar with the interface of HackerRank and understand the coding challenges. In order to solve the challenge, I had to demonstrate my logical thinking skills and some basic knowledge of coding in Python. This task is extremely useful as it helps students build a strong foundation in coding (carrying out arithmetic operations) and prepares them for coding interviews.

In Part B, I created a Digital Literacy Awareness Quiz using Google Forms. The form consisted of five questions, including both multiple-choice and short-answer types, aimed at assessing students' understanding of digital literacy concepts such as online safety, responsible usage and digital behaviour. I also shared the form and explored how responses are automatically collected and organized in a linked Google Sheet.

3.2 LESSONS BEYOND THE SCREEN

Through this task, I was able to understand the significance of using technical skills in interspersion with digital tools. HackerRank enabled me to enhance my coding skills, while Google Forms helped me understand the significance of data collection and digital collaboration. In the coming days, I hope to enhance my coding skills by undertaking more coding challenges

on HackerRank and continue to use Google Forms for academic surveying, feedback and research purposes.

In conclusion, the task was indeed very helpful as it allowed me to gain practical experience in coding and digital collaboration tools. It helped me gain a better insight into the effective use of digital tools for academic and career enhancement.

TASK - 4

(SCENARIO ANALYSIS)

4.1 THE SCREENSHOT FALLOUT

A student in a group project took a screenshot of a personal chat in which one of the members was complaining about the workload. The screenshot was then forwarded to the main group chat to “help clarify things.” However, the intention of the original message was not understood and it seemed that the member was complaining about everyone else. This created arguments and trust problems within the group, causing them to have poor coordination and hence a low-quality final product.

The problem in this scenario was that there was a lack of understanding in the communication due to the lack of tone and intent in digital communication.

2.4 IMPROVING THE APPROACH

The situation could have been managed more wisely by being more thoughtful and considerate in communication. Rather than directly sharing the screenshot in the public group, the student should have first discussed the issue personally with the teammate and tried to understand their point of view. This could have helped avoid any kind of misinterpretation and conflict.

Another important point to be kept in mind is to respect the boundary between personal and public communication. Sharing personal communications without consent can lead to distrust and awkwardness in a group. Moreover, the usage of empathetic and solution-based communication can also be very effective in diverting the group’s focus from conflict to cooperation. Encouraging open communication and mutual respect in a group can be more strengthening than weakening.

TASK - 5

(ANALYSIS)

While working on this topic, I was shocked by the simplicity of the process of committing identity theft. Until now, I thought that identity theft was a very complicated process, but what surprised me was that even a person's phone number, email ID or information available on their social media profiles was sufficient for a person to commit a theft against another person's identity. Also, the fact that a person can use a person's digital footprint to impersonate them and commit fraud was surprising as well as worrying at the same time.

I was also surprised by how people unknowingly contribute to identity theft by being unaware and adopting a careless attitude while posting information online. It was indeed an eye-opening experience to learn about the fact that a digital footprint, once created, can no longer be controlled by a person.

One thing I am going to ensure that I follow from now onwards is being more responsible while interacting with digital space by being more cautious while performing any action online because who knows if the next case of "the doppelganger case" that gets mentioned in another person's research paper or study is of my own.

CONCLUSION

FROM CTRL+C TO CTRL+KNOWLEDGE

If there was a moral to all this experience, it would be that just because we are able to use the internet doesn't necessarily mean that we are able to understand it. In the beginning of this project, it was somewhere between "pls send asap" emails and evaluating scenarios pertaining to potential victims of suspicious internship links when I realized that digital literacy was not about speed and rather it was about brains.

At first, I was under the impression that being "digitally literate" was all about being able to make awesome presentations, stalking people online in a very professional manner through LinkedIn and basically being able to survive in group work without having to do all the work, however while working on this project, I learnt that the real game was not about being smart online and that it was about being responsible, aware and a little bit paranoid in a good way.

The funniest yet scariest thing that I learned was that not all cybercrimes are done by genius individuals in a room with dim lighting; all they need was a little bit of carelessness on our part. One click, one oversharing and one "this looks legitimate" moment; we would have been unknowingly funding someone else's shopping spree and internship dreams (like in our case study scenario, the Anjani situation).

What I've truly learned is that digital life is like a permanent tattoo, everything we post, send or click leaves a mark. Whether it's our identity, communication style or online behaviour, it all builds a version of us that others see (and sometimes misuse).

Thus, we all have to be extremely careful online and hence in a world where being "digitally skilled" is easy to claim, what truly matters is being digitally aware, responsible and careful because real intelligence lies not in showing off skills, but in using them wisely and responsibly.
